

Wooldridge Datasets

Variable Codebook

12 Datasets · Introductory Econometrics: A Modern Approach

Wage Dataset (wage1)

Observations: 526 Variables: 24

Data from the 1976 Current Population Survey examining earnings, education, experience, and demographic characteristics. Useful for analysing wage inequality and the determinants of income.

Source: 1976 Current Population Survey (Henry Farber, MIT, 1988)

Variable	Type	Description
wage	float	Average hourly earnings (USD)
educ	int	Years of education
exper	int	Years of potential experience
tenure	int	Years with current employer
nonwhite	int	=1 if nonwhite
female	int	=1 if female
married	int	=1 if married
numdep	int	Number of dependents
smsa	int	=1 if lives in Standard Metropolitan Statistical Area
northcen	int	=1 if lives in north central U.S.
south	int	=1 if lives in southern region
west	int	=1 if lives in western region
construc	int	=1 if works in construction industry
ndurman	int	=1 if in non-durable manufacturing industry
trcommpu	int	=1 if in transport, communications, or public utilities
trade	int	=1 if in wholesale or retail trade
services	int	=1 if in services industry
profserv	int	=1 if in professional services industry
profocc	int	=1 if in professional occupation
clerocc	int	=1 if in clerical occupation
servocc	int	=1 if in service occupation
lwage	float	$\log(\text{wage})$
expersq	int	exper^2
tenursq	int	tenure^2

Housing Prices Dataset (hprice1)

Observations: 88 Variables: 10

Data collected from the real estate pages of the Boston Globe (1990) on homes sold in the Boston, MA area. Suitable for studying factors that influence real estate values.

Source: Boston Globe real estate listings, 1990

Variable	Type	Description
price	float	House price (\$1,000s)
assess	float	Assessed value (\$1,000s)
bdrms	int	Number of bedrooms
lotsize	float	Size of lot (square feet)
sqft	int	Size of house (square feet)
colonial	int	=1 if home is colonial style
lprice	float	log(price)
lassess	float	log(assess)
llotsize	float	log(lotsize)
lsqft	float	log(sqft)

GPA Dataset (gpa1)

Observations: 141 Variables: 29

Student-level survey data collected at Michigan State University in Fall 1994. Contains information on GPA, attendance, study habits, and academic performance.

Source: MSU student survey, Fall 1994 (Christopher Lemmon)

Variable	Type	Description
age	int	Age in years
soph	int	=1 if sophomore
junior	int	=1 if junior
senior	int	=1 if senior
senior5	int	=1 if fifth-year senior
male	int	=1 if male
campus	int	=1 if lives on campus
business	int	=1 if business major
engineer	int	=1 if engineering major
colGPA	float	MSU college GPA
hsGPA	float	High school GPA
ACT	int	ACT achievement score
job19	int	=1 if job $\leq$ 19 hours per week
job20	int	=1 if job $\geq$ 20 hours per week
drive	int	=1 if drives to campus
bike	int	=1 if bicycles to campus
walk	int	=1 if walks to campus
voluntr	int	=1 if does volunteer work
PC	int	=1 if has personal computer at school

Variable	Type	Description
greek	int	=1 if fraternity or sorority member
car	int	=1 if owns car
siblings	int	=1 if has siblings
bgfriend	int	=1 if has boy- or girlfriend
clubs	int	=1 if belongs to an MSU club
skipped	float	Average lectures missed per week
alcohol	float	Average days per week drinking alcohol
gradMI	int	=1 if graduated from Michigan high school
fathcoll	int	=1 if father is a college graduate
mothcoll	int	=1 if mother is a college graduate

Attendance Dataset (attend)

Observations: 680 **Variables:** 11

Data from principles of microeconomics classes at Michigan State University, examining the relationship between class attendance and student performance.

Source: MSU microeconomics classes (Professors Fisher & Liedholm)

Variable	Type	Description
attend	int	Classes attended out of 32
termGPA	float	GPA for the term
priGPA	float	Cumulative GPA prior to term
ACT	int	ACT score
final	int	Final exam score
atndrte	float	Percent of classes attended
hwrtte	float	Percent of homework turned in
frosh	int	=1 if freshman
soph	int	=1 if sophomore
missed	int	Number of classes missed
stndfml	float	Standardised final exam score: (final – mean) / sd

CEO Salary Dataset (ceosal1)

Observations: 209 **Variables:** 12

A random sample drawn from a May 1991 BusinessWeek report on CEO compensation. Useful for analysing executive pay and its relationship to firm performance.

Source: BusinessWeek, May 6, 1991

Variable	Type	Description
salary	int	1990 salary (\$1,000s)
pcsalary	int	Percent change in salary, 1989–1990
sales	float	1990 firm sales (millions USD)

Variable	Type	Description
roe	float	Return on equity, 3-year average 1988–1990
pcroe	float	Percent change in return on equity, 1988–1990
ros	int	Return on firm's stock, 1988–1990
indus	int	=1 if industrial firm
finance	int	=1 if financial firm
consprod	int	=1 if consumer product firm
utility	int	=1 if transport or utilities firm
lsalary	float	log(salary)
lsales	float	log(sales)

Crime Dataset (crime1)

Observations: 2,725 **Variables:** 16

Individual-level data on criminal history and socioeconomic characteristics, used in J. Grogger (1991). Suitable for studying the economic determinants of crime.

Source: Grogger, J. (1991), *Economic Inquiry* 29, 297–309

Variable	Type	Description
narr86	int	Number of times arrested in 1986
nfarr86	int	Number of felony arrests in 1986
nparr86	int	Number of property crime arrests in 1986
pcnv	float	Proportion of prior arrests leading to conviction
avgsen	float	Average sentence length (months)
tottime	float	Total time in prison since age 18 (months)
ptime86	int	Months in prison during 1986
qemp86	float	Number of quarters employed in 1986
inc86	float	Legal income in 1986 (\$100s)
durat	float	Recent unemployment duration
black	int	=1 if Black
hispan	int	=1 if Hispanic
born60	int	=1 if born in 1960
pcnvsq	float	$pcnv^2$
pt86sq	int	$ptime86^2$
inc86sq	float	$inc86^2$

Campus Crime Dataset (campus)

Observations: 97 **Variables:** 7

University-level data on crime incidents and institutional characteristics for 1992, compiled from FBI Uniform Crime Reports. Useful for analysing patterns and predictors of campus safety.

Source: FBI Uniform Crime Reports, 1992 (Daniel Martin, MSU)

Variable	Type	Description
enroll	float	Total student enrollment
priv	int	=1 if private college
police	int	Number of employed campus police officers
crime	int	Total number of campus crimes
lcrime	float	log(crime)
lenroll	float	log(enroll)
lpolice	float	log(police)

Minimum Wage Dataset (card)

Observations: 3,010 **Variables:** 26

Based on D. Card (1995), using geographic variation in college proximity as an instrument for schooling. Drawn from the National Longitudinal Survey and used to study returns to education and employment outcomes.

Source: Card, D. (1995); National Longitudinal Survey

Variable	Type	Description
id	int	Person identifier
nearc2	int	=1 if near 2-year college in 1966
nearc4	int	=1 if near 4-year college in 1966
educ	int	Years of schooling in 1976
age	int	Age in years
fatheduc	float	Father's years of schooling
motheduc	float	Mother's years of schooling
weight	float	NLS sampling weight, 1976
momdad14	int	=1 if living with both parents at age 14
sinmom14	int	=1 if living with single mother at age 14
step14	int	=1 if living with a step-parent at age 14
reg661–reg669	int	Regional dummies for 1966 (regions 1–9)
south66	int	=1 if in the South in 1966
black	int	=1 if Black
smsa	int	=1 if in SMSA in 1976
south	int	=1 if in the South in 1976
smsa66	int	=1 if in SMSA in 1966
wage	int	Hourly wage in cents, 1976
enroll	int	=1 if enrolled in school in 1976
KWW	float	Knowledge of the World of Work score
IQ	float	IQ score
married	float	=1 if married in 1976
libcrd14	float	=1 if library card in home at age 14
exper	int	Work experience: age – educ – 6
lwage	float	log(wage)

Variable	Type	Description
expersq	int	exper ²

Fertility Dataset (fertil1)

Observations: 1,129 **Variables:** 17

Based on W. Sander's study of women's schooling and fertility, drawn from the NORC General Social Survey (1972–1984 biennial waves). Useful for studying demographic and socioeconomic determinants of fertility.

Source: Sander, W.; NORC General Social Survey, 1972–1984

Variable	Type	Description
year	int	Survey year (72–84, even years)
educ	int	Years of schooling
meduc	int	Mother's years of education
feduc	int	Father's years of education
age	int	Age in years
kids	int	Number of children ever born
black	int	=1 if Black
east	int	=1 if lived in East at age 16
northcen	int	=1 if lived in North Central at age 16
west	int	=1 if lived in West at age 16
farm	int	=1 if on a farm at age 16
othrural	int	=1 if other rural area at age 16
town	int	=1 if lived in a town at age 16
smcity	int	=1 if in a small city at age 16
y74–y84	int	Year dummies for 1974–1984 survey waves
agesq	int	age ²
y74educ–y84educ	int	Interactions of year dummies with education

Basketball Salaries Dataset (nbasal)

Observations: 269 **Variables:** 22

Player-level data from the 1994–95 NBA season, compiled from The Complete Handbook of Pro Basketball and team media guides. Useful for analysing the relationship between player performance, demographics, and compensation.

Source: Complete Handbook of Pro Basketball, 1995; team media guides (Christopher Torrente, MSU)

Variable	Type	Description
marr	int	=1 if married
wage	float	Annual salary (\$1,000s)
exper	int	Years as a professional player
age	int	Age in years
coll	int	Years played in college

Variable	Type	Description
games	int	Average games played per year
minutes	int	Average minutes played per year
guard	int	=1 if plays guard
forward	int	=1 if plays forward
center	int	=1 if plays center
points	float	Points per game
rebounds	float	Rebounds per game
assists	float	Assists per game
draft	float	Draft pick number
allstar	int	=1 if ever selected as an All-Star
avgmin	float	Average minutes per game
lwage	float	log(wage)
black	int	=1 if Black
children	int	=1 if has children
expersq	int	exper ²
agesq	int	age ²
marrblk	int	Interaction: marr × black

Birth Weight Dataset (bwght)

Observations: 1,388 **Variables:** 14

Data from J. Mullahy (1997) drawn from the 1988 National Health Interview Survey. Examines infant birth weight together with parental smoking behaviour, education, and household income.

Source: Mullahy, J. (1997), Review of Economics and Statistics 79; 1988 NHIS

Variable	Type	Description
faminc	float	1988 family income (\$1,000s)
cigtax	float	Cigarette tax in home state, 1988 (cents)
cigprice	float	Cigarette price in home state, 1988 (cents)
bwght	int	Birth weight (ounces)
fatheduc	float	Father's years of education
motheduc	float	Mother's years of education
parity	int	Birth order of child
male	int	=1 if male child
white	int	=1 if white
cigs	int	Cigarettes smoked per day during pregnancy
lbwght	float	log(bwght)
bwghtlbs	float	Birth weight (pounds)
packs	float	Packs smoked per day during pregnancy
lfaminc	float	log(faminc)

Retirement Savings Dataset (401k)

Observations: 1,534 Variables: 8

Based on L.E. Papke (1995), using IRS Form 5500 data. Examines retirement savings plan participation, employer match rates, and firm characteristics. Useful for studying household savings and economic decision-making.

Source: Papke, L.E. (1995), Journal of Human Resources 30; IRS Form 5500

Variable	Type	Description
prate	float	Participation rate (%)
mrrate	float	401k plan employer match rate
totpart	float	Total number of 401k participants
totelg	float	Total number of employees eligible for the 401k plan
age	int	Age of the 401k plan (years)
totemp	float	Total number of firm employees
sole	int	=1 if the 401k is the firm's sole pension plan
ltotemp	float	log(totemp)
